PROFILE

I am a dedicated Web Developer and Backend Developer with a passion for creating efficient, scalable, and user-friendly applications. My expertise lies in developing and managing web applications, APIs, and bots that enhance user experiences and streamline processes.

WORK EXPERIENCE

I am a passionate web developer with a strong foundation in creating responsive and user-friendly websites. My mission is to design and build applications that not only have a visually appealing aesthetic but also deliver seamless and intuitive user experiences. I believe that a well-crafted website is more than just a digital presence; it's a vital tool that enhances user engagement and drives business success.

With extensive experience in HTML, CSS, Django, Python, and modern frameworks such as React and Angular, I bring a comprehensive skill set to the table. I specialize in transforming ideas into fully functional, dynamic web applications that are both scalable and efficient. My approach involves a deep understanding of the client's vision, coupled with the latest industry standards and best practices to ensure the final product exceeds expectations.

- **Recipe Application:** Developed a dynamic recipe platform that allows users to explore, share, and manage their favorite recipes with an intuitive interface and robust backend.
- **Goodreads Clone:** Created a book tracking and review system, replicating the core features of Goodreads, including user profiles, book ratings, and personalized recommendations.
- **Telegram Bots:** Designed and implemented multiple Telegram bots, including those for customer support, automated notifications, and interactive services, leveraging AI and NLP for improved user interactions.
